

DocWay™ Virtual Folders

Overview

DocWay Virtual Folders, an add-on component to DocWay Web Parts for SharePoint, provides Documentum users the ability to create their own folder structures, hierarchies, and views based on the attributes of stored documents.

Rather than asking your DocWay Web Parts users to stick with the rigid cabinet and folder rules defined by Documentum, allow them to store and view their information according to their own ideas with **DocWay Virtual Folders**.

Features and Benefits

- Designed to work with DocWay Web Parts for SharePoint.
- Seamless and simultaneous access to multiple Documentum ECM systems.
- Supports both Microsoft Office SharePoint Server 2007, Microsoft Search Server 2008, and Windows SharePoint Services 3.0.
- Define hierarchy of documents based on the attributes of the documents, not their folder locations.
- For date attributes, sort and store documents by year, year-month, or year-month-day.
- Quickly assign attributes by copying or creating documents into a virtual folder.
- Virtual Folder definitions are stored as Documentum objects, so they can be permissioned as normal objects.
- Share virtual folder definitions with all DocWay Web Parts users.

About Wingspan Technology

Wingspan Technology provides integrated content management, indexing, search, and archiving software solutions to Documentum and SharePoint users in the life sciences, financial services, aerospace, and defense industries.
