

DocWay™ Web Parts for SharePoint®

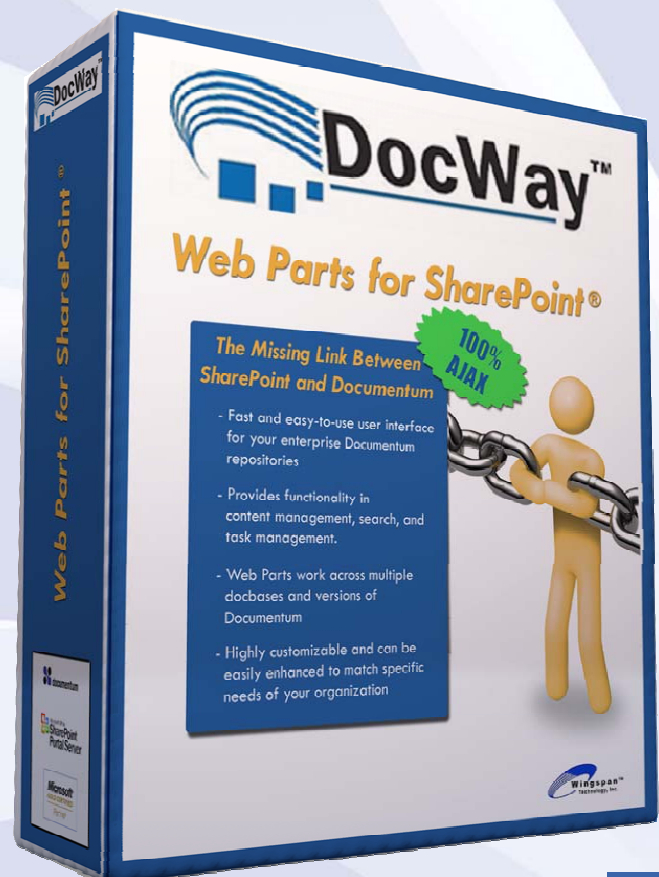

Overview

DocWay Web Parts for SharePoint gives organizations complete integration between SharePoint and Documentum. User-friendly SharePoint portals are commonplace in today's corporate environment, but until now, integrating them with Documentum systems has been complicated and time and resource intensive.

DocWay Web Parts for SharePoint provides functionality in three key areas: content management, search, and business process management. All Web Parts support multiple docbases and versions of Documentum and function either in isolation or in combination. The individual DocWay Web Parts are highly customizable and can be quickly and easily enhanced to match the specific needs of your organization.

Features and Benefits

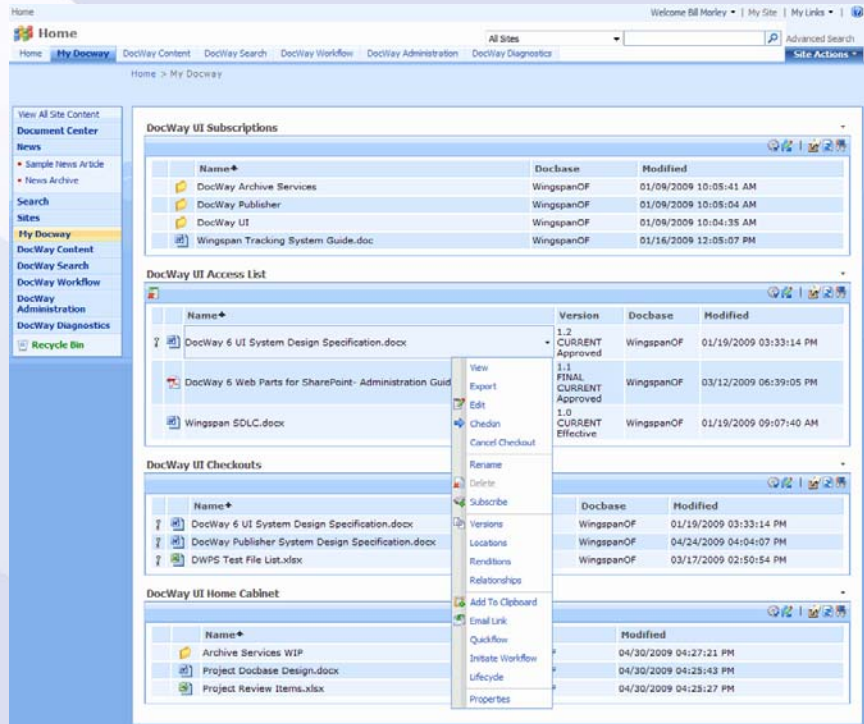

- Microsoft certified. 32-bit and 64-bit versions available.
- Seamless and simultaneous access to multiple Documentum ECM systems.
- Aggregates content and search results across multiple repositories.
